

**COMPOUNDS AND METHOD FOR RNA INTERFERENCE OF THE p65
SUBUNIT OF NF-KAPPA-B**

ABSTRACT

This invention relates to compounds, compositions, and methods useful for
5 modulating the expression and activity of NF-kappa-B by RNA interference
(RNAi) using small nucleic acid molecules, such as short interfering nucleic acid
(siNA), short interfering RNA (siRNA) and double-stranded RNA (dsRNA).
Furthermore the invention provides methods for preventing, treating or alleviating
NF-kappa-B dependent diseases whereby NF-kappa-B is believed to play a role
10 in the pathogenesis of a disease in a subject, preferably a human, by
administration of a therapeutic effective and in a pharmacologically accepted
form, the siRNA compounds of the invention.
